* The nominal engine power indicated in this document is the net power tested on a production engine for the engine model pursuant to SAE J1940 (Briggs\& Stratton) at a specific speed. This value may vary in mass produced motors. The actual output power of the engine installed on the end machine will vary depending on a number of factors such as the applicable engine operating speed, the environmental conditions, maintenance and other variables.
** These values are at direct pump outlet.
${ }^{* * *}$ The power, pressure and flow values are valid in working conditions: temperature $25^{\circ} \mathrm{C}$ at sea level. IMPORTANT: Engine power will decrease $3.5 \%$ for every 300 meters above sea level and $1 \%$ for each $5.6^{\circ} \mathrm{C}$ above $25^{\circ} \mathrm{C}$.

## 2 Water tank

Vallfirest horizontal stainless steel tanks have an optimized design that provides a low center of gravity under the skid unit for greater vehicle stability. The shape can be adjusted to the dimensions of the loading area to optimize the available space.

- Made of 2 mm AISI-304 stainless steel.
- 2 longitudinal and 1 transversal breakwaters to prevent water from moving to the side to ensure vehicle stability.
-11-1/2" filling spout on the top with couplings (Barcelona, Storz, Guillemin or others) to fill the tank from a hydrant or pressurized external water source.
- 1 configurable 1-1/2" high vent on the top.
- 1 hinged inspection cover with a useful diameter of 320 mm to inspect the tank.
- A water level indicator over connecting ducts.
- A 3/4" drain to empty the tank.
- Pump return connection to fill the tank by suctioning water from a non-pressurized external water source.
- The tank connects to the vehicle with 4 fixing points.
- Features 4 hoisting points to load and unload the skid unit safely.
- Enameled.
